Could you help me verify the sample description for first two samples?
By reading the "caulk shopping list", I assume that CK-R1-C1-1 is the black interior window caulk and CK-R1-IC2-2 is the interior gray building caulk. Am I correct?

You are correct, CK-R1-C1-1 is the black interior window caulk (should have a 1.5' section) and CK-R1-IC2-2 is the interior gray building caulk (should have a 6' section).

We were unable to adequately sample the exterior building caulk (also designated as C2 on the shopping list) at this location as the temps were too low and the material too brittle.
